Brown rice is a hulled but unpolished whole grain-rice that retains most of the bran layers, endosperm, and germ of the paddy.

Technavio's analysts forecast the Global Brown Rice Market to grow at a CAGR of 3.45% during the period 2018-2022.

Covered in this report

The report covers the present scenario and the growth prospects of the global brown rice market. To calculate the market size, the report considers the revenue generated from the sales of brown rice products.

The market is divided into the following segments based on geography:

- Americas
- APAC
- EMEA

Technavio's report, global brown rice market 2018-2022, has been prepared based on an in-depth market analysis with inputs from industry experts. The report covers the market landscape and its growth prospects over the coming years. The report also includes a discussion of the key vendors operating in this market.

Global Animal Nutrition Market Forecast 2019-2027

The global animal nutrition market is expected to have a CAGR of 5.94% during the forecast years of 2019-2027. Animal nutrition's are dietary supplements that offer health benefits for animals and in turn result in increased productivity and higher survival rates, as it boosts their immunities.

MARKET INSIGHTS:

The global animal nutrition market is segregated on the basis of product types, species, and applications. Animal nutrition is extensively used for various purposes. The sales of animal nutrition chemical products have increased among animal farmers owing to the unprecedented demand for meat which directly raises the firms' sales. Another major application of animal nutrition is household pets. Increasing population of pets is also a major market driver. However, the high cost of animal nutrition and low-quality products are among a few factors that are hindering this market's growth.

REGIONAL INSIGHTS:

The global animal nutrition market has been geographically segregated as North America, Europe, Asia-Pacific and the rest of the world. The animal nutrition market in the Asia Pacific is expected to hold the largest share and is expected to grow at a higher CAGR by 2027. Increase in livestock population and rise in demand for protein-rich meat have supplemented the market growth in this region. China, which is a major country in the Asia Pacific market, is one of the largest cattle producing nations in the world.

This report studies the Xylitol market status and outlook of global and major regions, from angles of players, regions, product types and end industries; this report analyzes the top players in global and major regions, and splits the Xylitol market by product type and applications/end industries.

The global xylitol production market was 102666 tons in 2017 and is expected to grow at a CAGR of 3.58% from 2017 to 2024. The Global Xylitol market size was 312.04 million USD in 2017 and it will be 412.75 million USD in 2024, with a Growth Rate of 4.08% from 2017 to 2024. Overall, the xylitol market is mature with stable supply and demand relationship. In the future, as the supply of xylitol has been tight since 2017, new facilities are expected to come upstream in the coming several years.

The major players in global Xylitol market include

- Danisco
- Futaste
- Shandong LuJian Biological
- Yuxin Xylitol Technology
- Roquette
- Huakang
- Shandong Longlive Bio-Technology

The growing demand for flavored and organic stevia is identified as one of the key trends that will gain traction in the market for the next four years. Many vendors such as SweetLeaf Stevia and Nirvana Health Products are offering liquid stevia in different flavors such as coconut, chocolate, vanilla, peach, banana, butterscotch, mint, mango, strawberry, caramel, and others. Technavio's analysts have predicted that the stevia market will register a CAGR of almost 8% by 2023.

Market Overview

Health benefits and environmental advantages

Consumers suffering from diabetes or those on carbohydrate-controlled diet, are considering the consumption of stevia as an ideal replacement for normal sugar. With the rising number of diabetic patients and health awareness, the demand for stevia is also increasing.

Increasing demand for monk fruit zero-calorie sweetener

Since monk fruit zero calorie-sweetener does not have a bitter aftertaste, many manufacturers of food and beverage are using these sweeteners over stevia. The rising use of this sweetener is a challenge for the market.

For the detailed list of factors that will drive and challenge the growth of the global stevia market during the 2018-2022, view our report.

The rising demand for processed and conveniently-consumable food items is identified as one of the key trends that will gain traction in the global keto diet market for the next four years. Consumers are adopting healthy ketogenic diets to lose weight. Technavio's analysts have predicted that the global keto diet market will register a CAGR of over 5% by 2022.

Market Overview

Health benefits of keto diet

Keto diets are most often associated with weight loss, but there are many other health benefits linked with them.

Growing demand and popularity of substitute products and diets

The demand and purchase volume of substitute products and diets is increasing among customers. In addition, the side-effects associated with the consumption of ketogenic diet is driving the consumers to prefer substitute products and diets.

For the detailed list of factors that will drive and challenge the growth of the keto diet market during the 2018-2022, view our report.

Liquid Milk Replacers Market by Type (Medicated and Non-Medicated), Livestock (Calves, Piglets, Kittens, Puppies, Foals, Kids & Lambs), and Region (North America, Europe, Asia Pacific and Rest of the World) - Global Forecast to 2023

Published by MarketsandMarkets

Pub. Date 2018/10/31

Price

USD 5650 PDF by E-mail (Single User License) ~

USD 10000 PDF by E-mail (Global License)

www.giiresearch.com/ce/739265

The liquid milk replacers market size is expected to grow from USD 188 million in 2018 to USD 243 million by 2023, at a Compound Annual Growth Rate (CAGR) of 5.3% during the forecast period. The liquid milk replacers market is driven by various factors such as the increasing consumption of dairy products and the adoption of precision nutrition techniques. However, logistical and preservation advantages associated with powdered milk replacers can hinder the growth of the market.

"The medicated segment is expected to grow at a higher CAGR during the forecast period."

The medicated segment is the faster-growing segment in the liquid milk replacers market, by type. The liquid milk replacers market, by type, has been categorized into medicated and non-medicated. Medicated liquid milk replacers provide various health benefits and improve the performance of infant livestock. These milk replacers are mainly fed to infant livestock that has physical and nutritional deficiencies, weaknesses, or diseases; and require an enhanced nutritional diet. This has led livestock rearers to use medicated liquid milk replacers.

Global Blockchain in Agriculture and Food Market: Focus on Stakeholders, Regulations, Application (Supply Chain Tracking, Finance Management, Data Management, and Land and Property Ownership) and Regional Adoption - Analysis & Forecast 2018-2028

Since the early 2000s, the global agricultural industry has witnessed a massive transformation owing to the increasing demand for sustainable farming practices. Rising global population and high-income growth in urban population have resulted in growing concerns of food security across the world. Various agricultural start-ups and technology innovators are developing numerous sustainable farming systems. One of the most disruptive technologies in the field of smart agriculture has been the digitization of supply chain. Since 2013, agri-food industry's interest in blockchain has rapidly evolved with multiplying pilot projects and companies dedicated to the swift development of technology. The advantages of blockchain technology for agriculture widely range from farmers to retailers to traders and to food companies. Eminent technology companies are striking collaborations with global logistics firms, food producers and retailers to develop effective applications of blockchain in agriculture and food sector to ensure improved data management, reduced transaction costs, augmented logistics, and robust food safety and traceability protocols.

USD 5650 PDF by E-mail (Single User License) ~

USD 10000 PDF by E-mail (Global License)

www.giiresearch.com/ce/737747

The food deaerators market is estimated to account for USD 270 million in 2018 and projected to grow at a CAGR of 6.1%, to reach USD 363 million by 2023. The key drivers of the market growth are the increasing beverage consumption, the growing demand for convenience food products with an extended shelf life, and reduced side-effects of the high-dissolved oxygen in beverages. In addition, increasing capital consumption in the beverage industry and investments by governments in the food processing machinery & equipment industry creates profitable growth opportunities. However, low capital investment for installation of food deaerators is projected to inhibit the market growth during the forecast period.

"The beverage segment led the market with the largest share in 2017."

On the basis of application, the food deaerators market is segmented into beverages and food. The beverages segment accounted for a larger share in 2018. It is further segmented into fruit drinks, dairy products, alcoholic beverages, and others such as non-carbonated artificial beverages and sports drinks. The demand for food deaerators is increasing due to the rising beverage consumption in developing countries across regions.

"The Baby Food Sector in Morocco, 2018", is an analytical report by GlobalData which provides extensive and highly detailed current and future market trends in the Moroccan market.

The birth rate remains significantly higher in rural areas than in urban areas. Approximately 47% of births in 2015 occurred in rural areas, although rural areas account for only 39.5% of the population. The growing middle class in Morocco is boosting demand for commercially prepared baby food, especially among families where the woman also works, while the expansion of supermarket retailing in urban areas will increase the availability of these baby foods.

What else does this report offer?

- Consumption data based upon a unique combination of industry research, fieldwork, market sizing work and our in-house expertise to offer extensive data about the trends and dynamics affecting the industry.
 - Detailed profile of the companies operating and new companies considering entry in the industry along with their key focus product sectors.
 - Market profile of the various product sectors with the key features & developments, segmentation, per capita trends and the various manufacturers & brands.
 - Overview of baby food retailing with a mention of the major retailers in the country along with the distribution channel.
 - Future projections considering various trends which are likely to affect the industry.
-

Pea Starch Market by Application (Food & Beverages, Feed, Pet Food, Industrial), Function (Binding & Thickening, Gelling, Texturizing, Film Forming), Grade, and Region (North America, Europe, Asia Pacific, Row) - Global Forecast to 2023

Published by MarketsandMarkets

Pub. Date 2018/10/24

USD 5650 PDF by E-mail (Single User License) ~

USD 10000 PDF by E-mail (Global License)

www.giiresearch.com/ce/735768

The global pea starch market is estimated at USD 91.8 million in 2018 and is projected to reach USD 134.7 million by 2023, at a CAGR of 8.0% during the forecast period. Some of the major factors driving the market include integrated use of pea starch in ethanol production, growth in the demand for convenience food, and an increase in the production of peas. Increasing instances of retrogradation impact the functional properties of pea starch, which is a major factor inhibiting the growth of the market.

"The food & beverages segment, by application, is projected to grow at the highest CAGR during the forecast period."

Pea starch finds use in various food applications such as confectionery products, processed food, beverages, and others; the segment accounted for nearly half of the global pea starch market share. It is generally used in food products to provide consistency in terms of texture and stability. In addition, it is a clean label substitute to modified starch such as corn and potatoes, which helps in expanding its utility in food products. Although pea starch is considered as a low-level substitute in the food & beverage industry over the years, its acceptance has increased in recent past, due to the growing demand for natural ingredients in products around the globe.

Aquaponics is a system that combines both aquaculture and hydroponics. It enables the growth of both fish and plants in a symbiotic environment.

Technavio's analysts forecast the Global Aquaponics Market to grow at a CAGR of 11.13% during the period 2019-2023.

Covered in this report

The report covers the present scenario and the growth prospects of the aquaponics market. To calculate the market size, the report considers the revenue generated from aquaponics systems across the globe.

The market is divided into the following segments based on geography:

- Americas
- APAC
- EMEA

Technavio's report, *Aquaponics Market 2019-2023*, has been prepared based on an in-depth market analysis with inputs from industry experts. The report covers the market landscape and its growth prospects over the coming years. The report also includes a discussion of the key vendors operating in this market.

Global Rice Starch Industry Research, China Market Entry and Growth Opportunity 2019-2024

This report studies the global Rice Starch industry status, China market entry and growth opportunity, focuses on the Chinese local and International manufacturers, analyzes the China market competition landscape, market size (value and volume), opportunity and challenge, risk and entry barriers.

Rice starch is characterized by very small granules in the range of 2-8 μm , being much smaller than those of other cereals, tubers and roots, such as corn and potato. Its granule size is comparable to the size of fat globules, therefore ideally suited to mimic a full bodied fatty mouthfeel. It provides creamy textures and can serve as natural fat replacer. It can be widely used in food industry, pharmaceutical industry, chemical industry and cosmetic industry.

International Players Covered:

- | | |
|------------------|-----------------------|
| • BENEQ | • Ingredion |
| • Bangkok starch | • Thai Flour |
| • AGRANA | • WFM Wholesome Foods |

Global Markets and Technologies for Food Safety Testing

The global food safety testing market should reach \$19.2 billion by 2023 from \$14.1 billion in 2018 at a compound annual growth rate (CAGR) of 6.4% for the period of 2018 to 2023.

The pathogen food safety testing market is expected to grow from \$10.5 billion in 2018 to \$14.7 billion in 2023 at a CAGR of 6.9% for the period of 2018 to 2023.

The GMO food safety testing market is expected to grow from \$1.2 billion in 2018 to \$1.6 billion in 2023 at a CAGR of 5.4% for the period of 2018 to 2023.

Report Scope:

The scope of this report covers the present status and future prospects for the markets for food safety testing in North America, Europe, Asia-Pacific, South America and the rest of the world (ROW). The food safety testing market is analyzed globally based on the types of contaminants: pathogen, pesticide, GMO, toxins, residue and others, and also in terms of their testing processes. The revenue forecasts from 2018 to 2023 are explained for each food testing method by technology, food and region.

"The Baby Food Sector in Ireland, 2018", is an analytical report by GlobalData which provides extensive and highly detailed current and future market trends in the Irish market.

The majority of mothers in Ireland use formula milks from birth or introduce formula milk by the second or third month, meaning that demand for first-stage and follow-on milks is very strong. The infant formula market has been strengthened by the high proportion of women aged 20-45 years of age who are in employment. Parents demand a greater diversity of baby foods to fit in with the ever-expanding choice available in adult foods. Manufacturers are providing more and more choices of milks and foods which claim to be organic.

What else does this report offer?

- Consumption data based upon a unique combination of industry research, fieldwork, market sizing work and our in-house expertise to offer extensive data about the trends and dynamics affecting the industry.
- Detailed profile of the companies operating and new companies considering entry in the industry along with their key focus product sectors.
- Market profile of the various product sectors with the key features & developments, segmentation, per capita trends and the various manufacturers & brands.
- Overview of baby food retailing with a mention of the major retailers in the country along with the distribution channel.
- Future projections considering various trends which are likely to affect the industry.

Commercial Seaweeds Market by Type (Red Seaweeds, Brown Seaweeds, Green Seaweeds), Method of Harvesting (Aquaculture, Wild Harvesting), Form (Liquid, Powder, Flakes), Application (Food, Feed, Agriculture), and Region - Global Forecast to 2023

Published by MarketsandMarkets

Pub. Date 2018/10/19

USD 10000 PDF by E-mail (Global License)

www.giiresearch.com/ce/357788

The commercial seaweeds market is estimated at USD 14.08 billion in 2018. It is projected to reach USD 21.11 billion by 2023, at a CAGR of 8.4%. The market is driven by its functional properties, which widens the new growth prospects for the food processing industry and the application of seaweeds and seaweed extracts, such as agar, carrageen, and alginate, which are used as gelling, binding, and thickening agents in the food, textile, and other manufacturing industries.

The growth of the brown seaweed segment, in terms of value, is estimated to dominate the global commercial seaweeds market in 2018. Brown seaweeds are increasingly used in the production of high-grade alginates. The increasing use of alginates in dental products is encouraging the leading companies to manufacture alginates from brown seaweeds. In the agriculture sector, brown seaweed extracts are used to produce organic fertilizers due to its potassium-rich content. The growing use of brown seaweeds in the manufacture of bio-plastics is further projected to fuel the market growth.

However, excessive use of seaweed products can adversely affect consumer's health due to the presence of toxic minerals such as heavy metal residues. This has led to increasing health concerns, globally, which, in turn, serves as a restraining factor for the growth of the commercial seaweeds market.

Plant-based Beverages Market by Source (Almond, Soy, Coconut, and Rice), Type (Milk and Other Drinks), Function (Cardiovascular health, Cancer prevention, Lactose intolerance, and Bone health) and Region - Global Forecast to 2023

The global plant-based beverages market is estimated to be valued at USD 11.16 billion in 2018 and is projected to reach USD 19.67 billion by 2023, at a CAGR of 12.0% during the forecast period. The growth of the plant-based beverages market is attributed to the growing popularity of vegan diets, especially among millennials; and the increasing demand for low-calorie options, amidst adaption of hectic lifestyles in developing countries. Additionally, companies are showing interest in the niche plant-based beverage segments by acquiring local players or investing in innovative products to tap consumer interests, which has also propelled the growth of this market. However, due to premium pricing of plant-based products in several countries, the cost of these products remains higher than dairy products. Therefore, Manufacturers are working on bringing down the prices of these products remains a challenge for the manufacturers in this market. Apart from this, in many emerging countries, there is a lack of awareness among consumers about the benefits of plant-based beverages over dairy beverages, owing to lack of proper promotional strategies. As a result, high reliance on dairy milk products is still prevalent in these regions.

Beverage capsules refer to single-serve containers, containing tea leaves, coffee or milk, which are installed in a coffee or tea vending machine. These capsules reduce brew time by up to 80% and provide a refreshing beverage without creating a clutter. They retain the freshness and authentic flavor of the ingredients longer than their ground equivalent which start losing the real flavour of the tea or coffee once, the pack is opened. As per IMARC Group estimates, the market for coffee capsules and tea capsules in Japan reached a value of US\$ XX Million and US\$ XX Million respectively in the year 2017.

The large working population in Japan has majorly contributed in propelling the demand for capsule beverages. It is traditionally a tea-consuming nation and has been experiencing growth in the demand for tea capsules owing to the associated advantages provided by them. On the other hand, the young Japanese are increasingly preferring coffee which is stimulating the consumption of coffee capsules. Looking forward, the market for coffee capsules and tea capsules in Japan reached a value of US\$ XX Million and US\$ XX Million, expanding at a CAGR of X% and X% respectively, during 2018-2023.

Coffee capsules are small in size and contain nearly 4 to 6 grams of cooked ground coffee. They assist in preserving the authentic flavour and aroma of coffee, and removing several steps in the brewing process like grinding beans, dosing and tamping the ground coffee. Likewise, tea capsules are convenient to use and help in saving time. At present, various types of tea capsules are available in the market, such as green tea, herbal tea, black tea, etc. As per IMARC Group estimates, the market for coffee capsules and tea capsules in Thailand reached a value of US\$ XX Million and US\$ XX Million respectively in the year 2017.

With the growing economy, Thailand is experiencing a burgeoning middle-class population, rapid urbanization, improving living standards, hectic schedules and changing dietary patterns. As a result of rising purchasing power, consumers are becoming more sophisticated and demanding convenient, high-quality and ready-to-drink beverages, thereby resulting in a rising demand for coffee and tea capsules. Looking forward, the market for coffee capsules and tea capsules in Thailand is expected to reach a value of US\$ XX Million and US\$ XX Million, expanding at a CAGR of X% and X% respectively, during 2018-2023.

Beverage capsules refer to single-serve containers which have ingredients disposed in their filter. The body includes a side wall which extends from an end wall to an opening with a cover. These capsules generally include coffee and tea which are generally utilised by tea and coffee vending machines in both commercial and domestic spaces. In South Korea, consumption of beverage capsules has been increasing rapidly due to strong coffee and tea culture. Consequently, the demand for coffee, tea and other beverages is experiencing a significant growth in the country. As per IMARC Group estimates, the market for coffee capsules and tea capsules in South Korea reached a value of US\$ XX Million and US\$ XX Million respectively in the year 2017.

South Korea is expected to experience a huge demand for coffee and tea capsules in the coming years. This is due to the fact that there is an increasing trend of in-house coffee consumption, as more people enjoy their own coffee at home or at work. While coffee is trending among millennial and Generation Z consumers, tea is also gaining traction among the younger generation. Innovation is another major factor that will aid to maintain a constant demand for beverage capsules in the market. In 2012, after the expiry of the design patents by Nestle, numerous F&B companies in South Korea entered into the beverage capsule market by developing their own machines and capsules at lower price points.

Beverage capsules are containers produced by using a mixture of plastic and aluminum. These are available in the form of single-serve pods or twin packs which offer two servings of instant beverage. The capsules usually carry brewed coffee, ground tea leaves and milk. They are mostly being used in coffee and tea vending machines which are installed at institutional and domestic locations. The robust growth in the e-commerce industry and increasing distribution network through various retail channels has been facilitating the consumers to consume more coffee, tea and milk powder capsules in the Philippines. As per IMARC Group estimates, the market for coffee capsules and tea capsules in Philippines reached a value of US\$ XX Million and US\$ XX Million respectively in the year 2017.

In the Philippines, there is an assortment of beverages which are gaining popularity among consumers. Beverage capsules, including tea, coffee and milk, are some of these innovations which are appealing a huge mass of population. At present, tea is being preferred on account of various health benefits offered by it such as avoiding illness and enhancing digestion process. Whereas, coffee is gaining momentum amongst teenagers and young adults owing to the availability of premium brands. Consequently, the demand for beverage capsules has also augmented in the country due to the rising adoption of western, on-the-go lifestyles which has further led to the acceptance among consumers regarding the consumption of different at-home variants of both tea and coffee.

USD 5650 PDF by E-mail (Single User License) ~

USD 10000 PDF by E-mail (Global License)

www.giiresearch.com/ce/731142

The flavor systems market is estimated to be valued at USD 5.64 billion in 2018 and is projected to reach 6.96 billion by 2023, at a CAGR of 4.3% from 2018. The market is driven by the creation of novel flavors driven by favorable consumer perceptions and the cross-product usage of flavors. Limited extraction from natural resources is the major restraint for the growth of this market.

"The fruits & vegetables segment, by type, is projected to be the fastest-growing segment from 2018 to 2023."

The fruits & vegetables segment is projected to grow at the highest CAGR during the forecast period. The rising awareness about health among consumers has led many manufacturers to include the usage of fruit & vegetable flavors in their products. As a result, the market is experiencing the highest growth rate.

"The liquid segment, by form, is projected to be the fastest-growing segment of the flavor systems market from 2018 to 2023."

The flavor systems market is estimated to be dominated by the liquid segment in 2018, which is also projected to be the fastest-growing segment in 2018. The dominance of the liquid segment is attributed to the fact that liquid flavors can be easily mixed together to provide a homogeneous distribution of each flavor component—a reason why most of the end-product manufacturers prefer the usage of liquid flavors.

The Persistence Market Research report on the global native starch market analyses the opportunities in the market, and presents updates and insights pertaining to various segments of the global native starch market over the forecast period 2018-2026.

This report provides forecast and analysis of the global native starch market. It provides historical data of 2017, along with estimated data for 2018, and forecast data up to 2026 in terms of revenue (US\$ Mn). The report also includes macroeconomic indicators along with an outlook on native starch for the global market. It includes the drivers and restraints of the global native starch market, and their impact on each region during the forecast period. The report also comprises the study of current issues with consumers, and opportunities for native starch products. It also includes value chain analysis of native starch market.

In order to provide the users of this report with a comprehensive view of the market, we have included detailed competitiveness analysis, market key players, and strategy overview of the global native starch market. The study encompasses market attractiveness analysis by source, end use, form, end use, and region.

Traceable Value Chains and Authentication in the APAC Food Industry. Forecast to 2023

Traceable value chains provide a chain of custody for a product or ingredient through a supply chain. Recent developments in traceability technology and forensic laboratory authentication methods have allowed new market segments to emerge within the food industry. This report explores how different elements integrate into a comprehensive traceability system. These elements include data capture devices, data carriers, traceability databases and interfaces, laboratory authentication services and certification services.

Traceability infrastructure and authentication technology both serve to protect food integrity. Traceable value chains are segmented into four applications and their respective markets.

Within the market for Critical Tracking Event (CTE) technology, RFID and scanning devices are well-established methods for capturing transaction and process data. Producers and food manufacturers are shifting towards more interoperable and simple systems that are flexible enough to avoid data redundancies due to regulatory incompatibility. This has placed a large focus on Key Data Event (KDE) information systems that provide the software to manage complex food supply chains. Large customers are developing their own platforms, exerting pressure on their suppliers to commit to integrating internal systems or risk losing supply contracts.

Global Market Study on Oat Flour: Increasing Health Consciousness Among Consumers Spurring Demand in Varied Food Products

The Global Nutraceutical Ingredient market was worth \$29540 million in 2016. It is expected to grow at a CAGR of 7.57% during the forecast period of 2017-2025 and is estimated to be worth \$56735 million by 2025. A phenomenal growth is observed globally in terms of new nutraceutical products being launched in the market. The major factors for the growth of this market are the increased use of nutraceutical ingredients in functional foods and beverages which act as beneficial dietary supplements, an increased shift in awareness regarding personal health care practices, growing elderly population and growing vegetarian and vegan food practices.

MARKET INSIGHTS

The nutraceutical market is segmented into two types: on the basis of application and the market type. The market application includes functional foods, functional beverages, dietary supplement, and others such products whereas, the market by type is further subdivided into products like fibres and specialty carbohydrates, vitamins, omega-3 and structured lipids, phytochemicals and plant extracts, minerals, carotenoids, antioxidants, prebiotics and probiotics, and other such products. Today, the markets has various opportunities at its disposal to explore for potential growth in various areas. This includes higher investments, rising demands from consumers for functional foods, and increasing awareness about the benefits of these products from the developed and the developing countries. However, the market is facing some serious challenges with respect to the stringent international laws and regulations, an increase in competition from small independent vendors, and the differences in consumer preferences.

Rice Seeds Market by Type (Hybrid and Open-Pollinated Varieties), Grain Size (Long, Medium, and Short), Hybridization Technique (Two-Line and Three-Line), Treatment (Treated and Untreated Seeds), and Region - Global Forecast To 2023

Published by MarketsandMarkets

Pub. Date 2018/10/12

Price

USD 5650 PDF by E-mail (Single User License) ~

USD 10000 PDF by E-mail (Global License)

www.giiresearch.com/ce/726411

The rice seeds market is projected to reach USD 7.62 billion by 2023, from USD 5.47 billion in 2018, at a CAGR of 6.85%. It is projected to grow at a steady rate due to factors such as a steady increase in the global rice production, growing awareness pertaining to the effect of commercial seed on rice yield, and increasing technological advancements, such as molecular breeding and hybridization technique for rice breeding. However, major factors restraining the growth of rice seeds are the high capital investment associated with rice seeds, low margins gained by farmers, and the imposition of regulations against genetic-based modifications for edible crops.

"Among different types, the hybrid seeds segment is projected to be the fastest-growing from 2018 to 2023."

Growing awareness about the advantages of hybrid seeds has encouraged adoption across the Asian countries. Multiple traits such as grain size and disease resistant, have been targeted by key players such as Bayer and DowDuPont for the development of hybrids. The major target focused by the players has been high crop yield. Innovations such as herbicide-tolerant hybrids have also gained traction in the developed countries such as the US and have increased the scope for market growth in the coming years.

a "The Baby Food Sector in Norway, 2018", is an analytical report by GlobalData which provides extensive and highly detailed current and future market trends in the Norwegian market.

Norway is an affluent country with a very high standard of living, which means that commercial baby food is affordable to all. The Norwegians' taste in food is typically Scandinavian, with high consumption of fish and dairy products. Potatoes are important and bread is often made with rye. Milk, sour cream, and cheese are consumed in abundance. All categories of baby food have seen both value and volume growth since 2011, despite a sharp fall in the number of births. The milks, meals, and cereals categories are forecast to develop well. However, the cereals and drinks categories will both face rising competition from meals.

What else does this report offer?

- Consumption data based upon a unique combination of industry research, fieldwork, market sizing work and our in-house expertise to offer extensive data about the trends and dynamics affecting the industry.
 - Detailed profile of the companies operating and new companies considering entry in the industry along with their key focus product sectors.
 - Market profile of the various product sectors with the key features & developments, segmentation, per capita trends and the various manufacturers & brands.
 - Overview of baby food retailing with a mention of the major retailers in the country along with the distribution channel.
 - Future projections considering various trends which are likely to affect the industry.

"The Baby Food Sector in Egypt, 2018", is an analytical report by GlobalData which provides extensive and highly detailed current and future market trends in the Egyptian market.

Despite having the largest population in the Middle East, Egypt has a small market for baby food, as the cost of commercial products puts them out of reach of the majority of consumers. Poorer consumers, and those who distrust commercially prepared baby foods, continue to feed their babies in the traditional way, gradually weaning them off breast milk with herb-based drinks, such as chamomile or peppermint, or other liquids, and then on to more solid foods.

What else does this report offer?

- Consumption data based upon a unique combination of industry research, fieldwork, market sizing work and our in-house expertise to offer extensive data about the trends and dynamics affecting the industry.
 - Detailed profile of the companies operating and new companies considering entry in the industry along with their key focus product sectors.
 - Market profile of the various product sectors with the key features & developments, segmentation, per capita trends and the various manufacturers & brands.
 - Overview of baby food retailing with a mention of the major retailers in the country along with the distribution channel.
 - Future projections considering various trends which are likely to affect the industry.

Vitamins Market by Type (Vitamin B, Vitamin E, Vitamin D, Vitamin C, Vitamin A, and Vitamin K), Application (Healthcare Products, Food & Beverages, Feed, and Personal Care Products), Source (Synthetic and Natural), and Region - Global Forecast to 2023

Published by MarketsandMarkets

Pub. Date 2018/10/10

Price

USD 5650 PDF by E-mail (Single User License) ~

USD 10000 PDF by E-mail (Global License)

www.giiresearch.com/ce/724027

The vitamins market is estimated to be valued at USD 5.18 billion in 2018 and is projected to reach 7.35 billion by 2023, at a CAGR of 7.3%. The market is driven by growth in the demand for functional and nutritionally enriched processed food products, the prevalence of vitamin deficiencies, and feed fortification due to a rise in global meat & dairy product consumption. The constrained supply of raw materials for natural vitamins, coupled with high costs, restrains the market growth of vitamins.

"Vitamin B is set to be the largest segment, in terms of type, for vitamins in 2018."

The vitamin B segment is estimated to be the largest in 2018 in the vitamins market. Vitamin B is required for the proper functioning of the body. Each type of vitamin B provides varied health benefits such as enhancement of skin health, the production of red blood cells and cellular energy, and proper functioning of the nervous system. Furthermore, multiple benefits of vitamin B such as generation of energy and maintenance of immunity and digestive health; as well as their application in multiple industries have led to the dominance of this segment in the vitamins market.

Citrus Oil Market Report - Size, Share, Trends, and Forecast to 2026

Citrus oil is mainly extracted from the peels of citrus fruits such as lime, orange, and lemon among others. Unlike the extraction of other essential oils, cold pressing or expression is used in the production process of citrus oil. It has wide application among various end-use industries such as food & beverages, cosmetics & personal care, and pharmaceutical. Rising demand for natural extracts in pharmaceutical, cosmetics & personal care, and food & beverages industries is one of the major factors driving growth of the market, worldwide.

Increasing cost of conventional allopathic medicines and side effects associated with its usage such as nausea, vomiting, and diarrhea are driving the growth of herbal medicines and thereby, increasing growth of the citrus oil market as well. For instance, according to the data provided by World Health Organization, the global demand for herbal medicines is expected to reach US\$ 5 trillion by 2050.

Market Dynamics

Europe dominated the global citrus oil market in 2017. Growing demand for citrus oil from cosmetics and pharmaceutical industries in the region is fueling growth of the citrus oil market. Citrus essential oils (mostly essence of orange) are used as flavoring agents to mask the taste of active pharmaceutical ingredient (API).

The market for nutraceuticals is growing at a modest rate due to emerging demand from food & beverages, pharmaceuticals, dietary supplements and other industries. The growing demand for vitamins and minerals-enriched herbal shampoos, creams and other related products will boost the market growth. Nutraceuticals market by functional foods is enriched with proteins and variety of flavors with herb blends, yogurts (probiotics) and soy. Nutraceuticals used in dietary supplements such as capsules, tablets, cream and liquids are increasingly adopted for health benefits and maintenance of healthy physique. Nutraceutical ingredients which include prebiotics, probiotics, fibers, amino acids, structured lipids Omega 3, vitamins, proteins and minerals are adopted across the globe for their utility and positive results. According to OMR analysis, global nutraceuticals market is predicted to grow at a CAGR of 7.2% during 2018-2023.

The factors driving the nutraceuticals market include rising awareness and growing demand for healthy food and dietary supplement among health-conscious individuals. With the improving standard of living the demand for healthy and nutritional food will grow significantly during the forecast period. Preference for nutritional value of the food will boost the nutraceutical market across the globe. All these factors are proving to be a good boost to the nutraceuticals market.

The integrated food ingredients market is estimated at USD 60.90 billion in 2018 and is projected to grow at a CAGR of 4.9% to reach USD 77.48 billion by 2023. The market is driven by factors such as increasing R&D and technological advancements in various industries, growing number of end-use applications, increasing demand for convenience and processed foods due to changing lifestyle, and multi-functionality of hydrocolloids. However, the increasing demand for natural flavors due to the rising health cautiousness is further accelerating the market growth.

"The beverages segment is projected to grow at the highest CAGR during the forecast period."

The growing consumption of beverages such as juices, tea, coffee, and alcoholic beverages, especially in developed nations such as Australia, the US, and various countries across the European Union, is driving the growth of the integrated food ingredients market. However, beverage manufacturers are introducing a large variety of non-alcoholic ferments as a part of integrated food ingredients to enhance the mouthfeel, texture, smoothness, flow, and nutrition content of beverage products. The beverages segment is dominated by dry key mixes, whereas juice-based compounds are anticipated to grow in the next 5 years.

The global Dairy Protein market was valued at USD xx million in 2016, USD xx million in 2018, and is forecasted to reach USD xx million by 2025, with a CAGR of xx% during the forecast period.

Dairy proteins have a unique combination of high nutritional values combined with excellent functionality. Increasing consumer awareness, especially for functional foods and dietary supplements, has been a critical factor for market development in recent times. Global animal protein production is a USD 1.35 trillion business in 2014, with the market for dairy standing out as the leading source of animal-based protein.

Asia has the highest market share (31%) of Dairy Protein Market. In Southeast Asia, there is potential for whey protein sports nutrition powders and energy/nutrition type products for sports- and fitness-inclined consumers. In countries such as China, Vietnam, and Saudi Arabia, there is growth potential for whey protein used in child nutrition formulas. Singapore serves as a production base for child nutrition products to Southeast Asia. While breast-feeding remains a preferred method of infant feeding, dairy protein can play an important role in the overall child nutrition picture.

A blockchain is a digital ledger in which transactions made are recorded chronologically. The blockchain is considered to be a most secure way to share the transactions and its details as it's distributed across each stakeholder across the system. As the transactions are recorded on each stakeholder, it's nearly impossible to alter or tamper with it. This factor plays a very important role in supply chain management. As supply chain is the series of transactions and the visibility across the supply chain would help reduce the various unnecessary cost and wastages across it. The use of blockchain within Agrifood would help to reduce the food frauds, will establish the authenticity of the product, and improve customer satisfaction.

The Global Agrifood Blockchain market accounted for USD XX million in 2017 and is expected to grow at a CAGR of XX% to reach USD XX million in 2025.

The Global Forage Seed Market was valued at USD xx million in 2017 and is estimated to reach USD xx million by 2025.

The expected CAGR of the forage seed market is xx% during the forecast period.

Driving factors of global forage seed market

The market is driven by increasing demand for livestock products, including eggs, meat (beef, pork, and mutton), and milk combined with the rise in meat consumption.

Other factors causing the growth include: Growing industrialization in livestock sector, growth in feed additive industry fuelled by an increase in meat consumption, rising concerns over quality and safety of the animal and human health.

However, the market growth is restrained by lack of awareness among consumers and favourable government policies for cereals crops.

Government policies are leading towards decrease in area cultivated for forage crops.
